

User group Page Flowchart

Open User Group Page

Show loading placeholder till the data for category list and roles list are fetched from the APIs.

After getting data from API, show the category/subcategory selection drop-down, search bar, Add new role button and table to display user groups.

On clicking the category selection box, the list of categories and subcategories will be displayed.
On selecting a subcategory, it will be reflected in the URL and the groups containing the stations under that subcategory will be displayed in the list.
On selecting a category, it will be reflected in the URL and the groups containing the stations under that category will be displayed in the list.

On searching for a user group, the URL gets updated with the entered text and the filtered list is searched for the entered text and the result is shown according to the matched results.

On clicking create new group button, a pop up opens with some fields to enter the details such as group name, role, description, station/ station group and users.
After inserting the details, click save to save the new group.
A button loader will be shown until we get a response from the API.

On clicking menu button (three dots) in the Action column, an option menu opens to edit and delete the group.

On clicking delete button, the URL is updated and a confirmation dialog opens to confirm the delete operation.
If confirmed the group will be deleted.
If cancelled, the group will not be deleted.
A button loader is displayed until we get a response.

On clicking edit button, a pop opens with some fields to edit the details such as group name, role, description, station/ station group and users.
After editing the details, click on save button to save the changes made.
A button loader is displayed until we get a response.
