## **Devices Page Flowchart**

Show loading placeholder till the data of the devices are fetched from the APIs.

After getting data from API, show the tabs for the device type.

Each tab will display the pie chart, recent activities and table if it has devices under that type.

Or it will show the error message.

On clicking a tab, the type id is added to the URL and the API is called to fetch the device data of that type.

Until the data is being fetched, loading is shown to the user.

After getting the response from the API, the details will be shown to the user.

On clicking a segment from the Pie chart, the URL is attached with the segment and the devices under that segment is shown in the box beside it.

Recent activities of the devices are shown in the box

Recent activities of the devices are shown in the box beside that box.

A table is shown below where the details of the devices are displayed. A search bar is above the table to search for a particular device QR code or station name.

The searched word is also reflected in the URL.
